

Tidy Software

High Quality Service

Over 30 years experience in software development

Case Study: Automatic Processing Of Web Orders Page 1

Industry: Office Stationery.

Type Of Software: Microsoft Windows PC based.

Client: Katlog Systems Ltd Hereford / CBS Ltd, 1 Winship Road, Milton, Cambridge.

Software Development Cycle: February 2003 To Present Day.

System Cost: £500 per annum software rental (includes support).

Development History: We were approached by a software developer that supplied the office stationery accounting system, to produce this software for a key client. The client had been promised this function at the point of sale by the office software company who then commissioned us to write this added value software for them. The software company supplying the office stationery system has since ceased trading, but we have continued supporting the client in the use of Spedikat, as well as the software that they originally supplied (called Statkat).

Software Outline: Spedikat is designed for the small to medium sized office equipment dealer who wants to automate the import of orders generated by his web store customers. These sales orders are then posted as invoices into an accounts system (in this case Sage Line 50).

Prices charged for goods on the web store are reconciled with prices held in the accounts system. This process eliminates having to rekey sales orders, highlights line by line price discrepancies (outside set tolerances which can be ignored) and identifies duplicate orders placed through their office stationery accounting system (Statkat).

As up to a hundred orders a day may be received, this system saves a considerable amount in time and effort.

Once these records have been exported to Sage Line 50 as summary invoices, the sales order details can then be safely archived.
